HARDY SEEDS FOR THE ROCK GARDEN-- See Page 7

Currie's Floral Department

This is an important department in our business, one that has grown to great proportions, and steadily increasing. Our many years of practical experience enables us to produce the most effective arrangements with cut flowers and plants for all occasions. With our improved methods we ship Cut Flowers and Floral Emblems by express to distant points so as to arrive in perfect condition. When the distance is too great we have a reliable florist in the vicinity take care of the orders. For this purpose we have a correspondent in all main cities in the United States and Canada.

Flowers Delivered Anywhere at Any Time

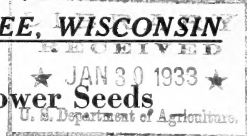

Our membership in the F. T. D. A. (Florists' Telegraph Delivery Association) enables us to do this. There is no better way to remember your friends at a distance than to

Currie's Novelties and Specialties in Flower Seeds

Petunia Cockatoo

PETUNIA HYBR. NANA COMPACTA "COCKATOO"

"Cockatoo" was introduced in Europe last year. The plants attain a height of 8 inches, are round and compact, covered with small round blossoms and are splendid for beds and borders. The flowers are a velvety deep violet purple with irregular sized white spots and stars which give to the plant and bed and extraordinarily gay and vivid appearance. Pkt., 25c each.

PETUNIA, BLUE BEE

Medium sized flowers of deep blue, very desirable for blue gardens. Pkt., 15c.

CURRIE'S SWISS GIANT PANSIES

A Giant Flowering strain consisting of many colors unheard of in the pansy family, brilliant colors of orange, scarlet blue, golden yellow, sulphur and carmine shades. The flowers are perfectly round and of gigantic size, they bloom early in the spring and continue throughout the summer. Pkt., 50c; $\frac{1}{16}$ oz., \$1.25.

PETUNIA DWARF GIANTS OF CALIFORNIA

The plants are very dwarf and bushy, the flowers very large and cover a wide range of colors. Excellent for pots and borders. Pkt., 25c.

PETUNIA FLUFFY RUFFLES

A valuable addition to the list of large flowering Petunias. Although the flowers are not quite as large as Giants of California, they cover a wider range of colors and markings, all being beautifully fringed and ruffled. Pkt., 25c.

MARIGOLD, NEW AFRICAN ORANGE ALLDOUBLE

A new development in this popular annual; heretofore the average was about 50% double, but this new strain will produce practically 100% double flowers. Pkt., 25c.

MARIGOLD, NEW AFRICAN LEMON ALLDOUBLE

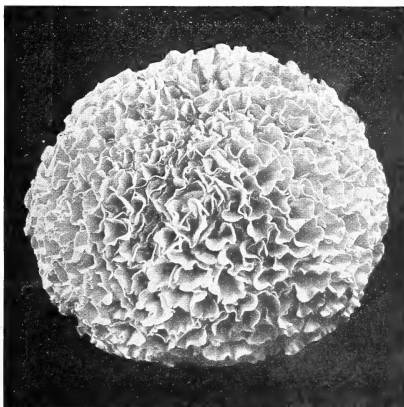

We are pleased that we can offer the lemon color in the all double strain. "Lemon All Double" has come 95% true. Pkt., 25c.

PETUNIA GRANDIFLORA FIMBRIATA CLAMOR

Large flowers of a brilliant crimson color, with white specks. The contrast makes it a very beautiful Petunia. Pkt., 20c.

DIANTHUS, SWEET WIVELSFIELD

This new annual is a hybrid, being a cross between Dianthus Alwoodi and Sweet William; seed started indoors in January and planted out in April will commence to flower in May, blooming profusely all summer in a great variation of colors. Pkt., 25c; \$1.00 per large pkt.

Marigold All Double

Currie's Novelties and Specialties in Flower Seeds

NEW DOUBLE SWEET SCENTED NASTURTIUM

Golden Gleam

Double Nasturtiums are not new, but up to this time have been propagated only by cuttings, and it has been generally believed they would not reproduce themselves from seed. Therefore it gives us great pleasure to offer for the first time this unique novelty in Nasturtiums, which has been named Golden Gleam. The plant forms a vigorous, large bush which throws out short runners, averaging eighteen inches. The flowers commence to come as soon as the plant nears complete development, and at the time it is in full bloom the entire plant including the runners, is a blaze of color. The large, golden-yellow flowers average two and one-half to three inches across. They are borne on erect, stiff stems six inches in length. Consequently the flowers stand well above the foliage, an arrangement which adds immeasurably to the showy appearance of the plant.

When well grown these flowers have the appearance of a fully double flower, and are most attractive. An ordinary sized bouquet, when allowed to remain in a room for a short period of time, will fill the room with fragrance. **Pkt., 25c.**

ASTER GIANT CALIFORNIA SUNSHINE MIXED

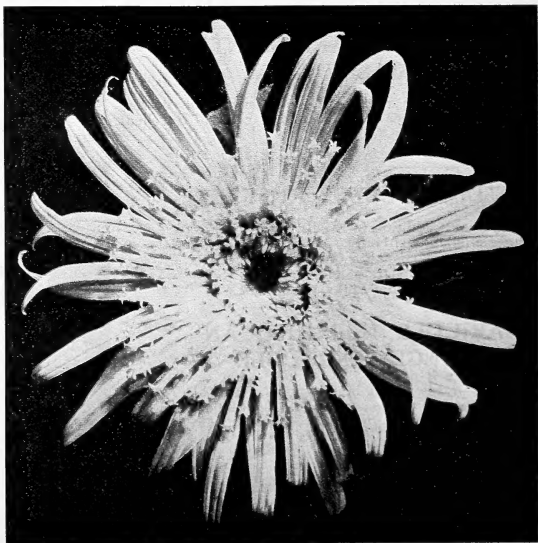

The color in these new Asters is startlingly beautiful. A dual-tone effect is obtained through the contrasting tints of the disc-like center and the outer or guard petals. Gracefulness of form is a distinguishing characteristic. The full centers of tubular, bifurcate petals surround the center, creating an airy, lace-like effect, which is altogether charming. In color, the flowers may be described as varying shades of Enchantress-pink, Appleblossom, Deep-rose, Blue and Lavender, but the disc, sometimes light yellow, sometimes blue, brings additional variety in tint. A bouquet comprising the complete ensemble of shades, presents delicate gradations of color as well as startling color contrasts which enchant the eye of the beholder. We feel confident this glorious new strain will be acclaimed a distinct acquisition to modern floriculture. **Pkt., 25c.**

SWEET WILLIAM "PURPLE BEAUTY"

The *Dianthus barbatus* assortment is greatly enriched through the introduction of this new sort. It is a noteworthy colour so far unknown among the Sweet Williams. The bright deep purple makes them especially suitable for effective bedding out purposes. It should also rapidly attain popularity as a cutting flower. The same method of cultivation should be adopted as with all Sweet Williams. **Pkt., 25c.**

DELPHINIUM ELATUM "ICEBERG"

This is the first white perennial Delphinium which comes true from seed. It belongs to the elatum class and grows 48 inches high. The 20 in. long spikes are thickly covered with large pure white blooms. These plants are especially noted for their strong healthy growth; they flower from June to August. In the second year when the plants are fully grown the big white spikes are particularly beautiful and form an effective contrast to dark and pale blue varieties. The Iceberg seedlings will be the starting point for creating splendid new varieties, since although great progress has been made with all blue shades of Delphinium. **Pkt., 25c.**

Antirrhinum Tom Thumb "Dainty Gem."

**ANTIRRHINUM
TOM THUMB
"DAINTY GEM"**

We herewith offer a color, which has hitherto been lacking in this section, and a plant with the real compact Tom Thumb habit. The plants stand evenly like ranks of soldiers and the strain comes true from seed, not throwing a percentage of taller plants like most other varieties of its class. The flowers are of a beautiful delicate shade of rose, closely resembling the favorite sort, Fascination, and nothing better can be imagined for flat dwarf bedding schemes and ribbon borders. It will also be exceptionally valuable for cultivation in window boxes, the Tom Thumb Antirrhinum being a favorite plant for this purpose and one of the most suitable. **Pkt., 25c.**

ANTIRRHINUM NANUM GRANDIFLORUM TANGERINE

A distinct achievement in the Nanum Grandiflorum group. The flowers are a brilliant fiery orange of great intensity holding its orange brilliancy till the flowers drop, throwing many long spikes with fine large flowers. Tangerine will make an excellent bedding variety having a color much in demand lending itself to color schemes for the garden beautiful. **Pkt., 25c.**

ARCTOTIS HYBRIDA

Undoubtedly this new variety of Arctotis is one of the most beautiful novelties introduced during the last few years. It is a hardy annual, height about 12 inches. The flowers are of beautiful shades of colours with a dark disk at the center. The leaves are crested and fringed, on the upper part of a green and underneath of a silvery color. **Pkt., 25c.**

AGERATUM GRANDIFLORA FARAONE

This is a new variety of Ageratum, which surpasses all the other varieties known to horticulture. Its great value is due to the dwarf and compact habit and to the very long flowering. The flowers are of a beautiful blue color, which after many days, changes slightly into a rosy color. This, together with the bright blue color, is of a marvelous effect. **Pkt., 25c.**

This new variety brings out an entirely distinct strain growing 4 to 5 feet high and is of a branching habit, all the stems being studded with prettily waved and fringed flowers. As many as 45 distinct colorings have been noted in one plantation and it blooms fully ten days ahead of the ordinary varieties. **Pkt., 25c.**

Hollyhock Double "Imperator."

NEW PERENNIAL POPPY

**PAPAVER "ORIENTALE"
"THE FELTHAM"**

Some fourteen years ago our growers originated at their Feltham grounds a new departure in Oriental Poppies, and by dint of continual selection have now succeeded in fixing a distinct and valuable strain. It has all or nearly all the various shades of the type—scarlet, orange scarlet, apricot, etc.—but with no black blotches at the base of the petals. The flowers are thus all self-coloured, the difference being comparable with that between the Shirley Poppy and its prototype the Papaver Rhaeus. We have no doubt that the Feltham strain has a great future as a brilliantly decorative border plant.

Price Pkt., 25c.

**PAPAVER NUDICAULI
FAKENHAM HYBRID**

This beautiful poppy differs from other Iceland varieties in many ways, the flowers are of good size and are borne on long slender wiry stems, it is exceptionally free and graceful and is practically perpetual flower. Many new tints such as apricot, biscuit, mauve, deep tangerine, lemon in all shades are to be found, as a cut flower it is beautiful, lasting for days in water if picked young.

Price Pkt., 35c.

Papaver Orientale "The Feltham."

Currie's Novelties and Specialties in Flower Seeds

Salvia Splendens "Harbinger."

SALVIA SPLENDENS "HARBINGER"**SALVIA HARBINGER**

The best of all the Salvias, the plants are dwarf and compact. Plants raised from seed sown the end of February commence to produce in profusion their long spikes of dazzling scarlet flowers early in June and maintain a blaze of color until frost. Pkt., 25c.

SCABIOSA CAUCASICA GOLDINGENSIS

This is the finest strain of Scabiosa caucasica yet produced. The flower is very large, of a rich deep lavender colour, and borne on long, strong stems. We are sure that this strain will find a large measure of favour amongst the rapidly increasing number of those who grow this very popular flower. It received an Award of Merit from the R. H. S. last summer. Pkt., 25c.

SCABIOSA GIANT LOVELINESS

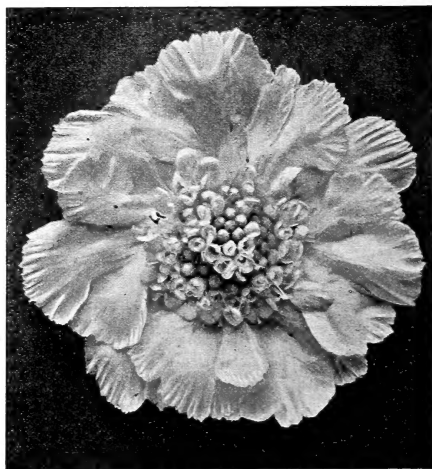

Loveliness is a glorious new color in annual Scabiosa, the blossoms range through varying tones of delicate Salmon Rose, it is unsurpassed as a cut flower. It has long stiff stems and a delightful fragrance. Pkt., 25c.

NEW ZINNIA**Cut and Come Again Pinkie**

Medium sized flowers of a light Rose-Pink with long stems especially suitable for cut flowers and for massing in the garden. A continuous succession of blooms are produced throughout the summer, making the name Cut and Come Again most appropriate. The dainty color and form of Pinkie are so charming as to quite overcome the criticism of coarseness so often complained of in Zinnias. Pkt., 25c.

ZINNIA SCABIOSA FLOWERED

This new Zinnia is entirely different to all the other classes. The plant reaches a height of about 40 inches and is abundant flowering. Its curiosity consists in the form of the flowers, as the outer ring is formed of long petals, whereas the center shows many small flowers which at first sight have a great likeness with the Scabiosa. Pkt., 25c.

Scabiosa Caucasica Goldingensis.

DIANTHUS "HIGHLAND QUEEN"

The most brilliant perennial Dianthus in cultivation, bearing in profusion flowers of a lustrous scarlet vermilion color, which captivates the beholder at first sight. It is extremely hardy, of vigorous growth, and ideal for bedding, borders and the rock garden, continuing in bloom, as it does, from the end of May until November. Pkt., 25c.

CURRIE'S LAWN GRASS SEED

*Produces A Rich, Thick, Velvety Lawn
in SIX WEEKS*

A Beautiful Lawn and How To Secure It...

It is universally conceded that nothing contributes so much to the beauty and attractiveness of the Home Grounds, the Park and the Cemetery, as a smooth, uniformly rich-green, well-kept lawn. But to be perfect and a pleasure to walk on this should have a firm yet elastic and carpet-like surface, and the first consideration in laying out or renovating old grounds should be to secure this condition.

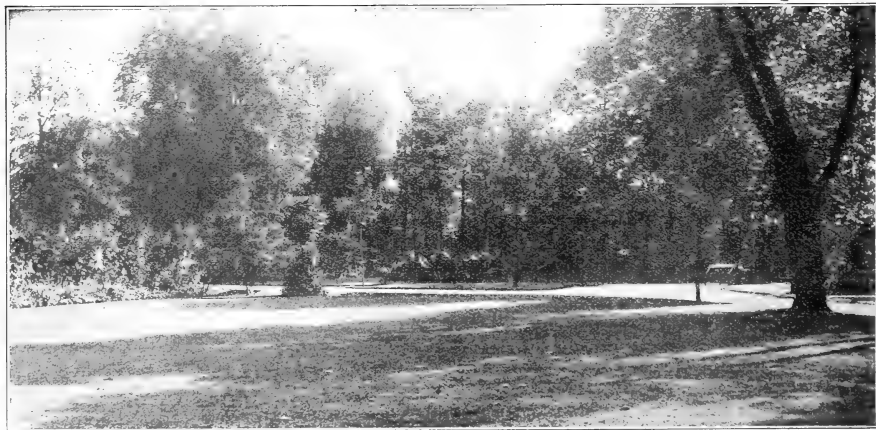

Turfing with fine old pasture sod, at one time a popular method of making a lawn, is now largely superseded by seeding, because of the expense and difficulty in obtaining good, clean turf. Seeding is not only inexpensive but is in reality the only means of securing a fine and permanent lawn, depending only for its complete success on the thoroughness with which the ground is prepared, the quality and quantity of the Seed sown, and the subsequent care of the lawn.

Our extensive experience in the seeding of lawns and exhaustive experiments with all kinds of lawn grasses have demonstrated beyond a doubt that while many kinds are valueless, being too coarse or bunchy or otherwise unsuitable, one kind of grass alone cannot be relied upon, in our climate, to produce and maintain a fine lawn. It is only by using a proper combination of several suitable varieties, sown liberally, that satisfactory results can be obtained.

CURRIE'S LAWN GRASS MIXTURES are the result of years of study and careful observation, and, if our directions are followed in seeding, they never fail to produce quickly a thrifty growth of fine, velvety, rich green grass, continuous in verdure from early spring to winter, and creating a springy, dense, carpet-like turf and permanently beautiful lawn.

THE QUANTITY OF SEED REQUIRED—There is no fixed rule, but a liberal sowing is always satisfactory, while a light seeding is a waste of time and usually disappointing. A beautiful lawn may be produced in a few weeks, or it may not approach perfection for two or more seasons, according to the quantity of Seed sown. When in a hurry for a fine, close turf, we have frequently sown at the rate of seven, or even eight, bushels of 20 lbs. to the acre, with the most gratifying results, but in general the following quantities will produce satisfactory results: 1 pound to 300 square feet; 5 pounds to 1,500 square feet; 20 pounds to 6,000 square feet; 100 pounds (5 bus.) per acre.

In thickening up established lawns slightly smaller quantities, depending on conditions, may perhaps be sufficient, but it is always well to put on enough.

CURRIE'S SPECIAL LAWN GRASS MIXTURE

THOROUGHLY TESTED AND ANALYZED FOR
GERMINATION AND PURITY

Composed of Evergreen Grasses, best suited to our American Climate, only the finest and cleanest grades of Seed being used. This splendid mixture is composed of only the finest dwarf-growing evergreen grasses; absolutely free from weed seeds or other impur-

ities; especially adapted and mixed in the proper proportions to suit the American climate. In comparing the cost of our Special Lawn Grass with other mixtures sent out by the trade, remember that the actual weight per measured bushel of our mixture is 20 pounds or more, while that of most mixtures is only 14 pounds per bushel. To obtain this exceptionally heavy weight per bushel, we must and do use only the heaviest and best samples of the various grasses which compose our mixture. This is in itself a guarantee against sowing weed seeds, as the heavier the mixture the more thoroughly cleaned have been the component grasses. Price per lb., 50c; 5 lbs., \$2.25; 10 lbs., \$4.00; 20 lbs., \$7.75; 100 lbs., \$35.00.

Grass Mixture for Shady Places

LAWN GRASS MIXTURE FOR SHADY PLACES

If wanted by mail add for postage at zone rates

To maintain a nice growth of grass under trees and in places where the sunlight only reaches part of the day was long considered almost hopeless. This can now be overcome in a great measure by our mixture, which is composed of dwarf, compact growing grasses that naturally grow in partial shade and will maintain a close, thick turf throughout the entire season. It frequently happens that the ground under trees becomes impoverished by the roots of the trees, making it almost impossible for grass to thrive unless a liberal top dressing of fertilizer is supplied, or when the ground has soured and covered with moss an application of ground lime will be found beneficial before sowing the seed.

½ lb., 35c; 1 lb., 60c; 2½ lbs., \$1.45; 5 lbs., \$2.75; 10 lbs., \$5.65; 20 lbs., \$11.00; 50 lbs., \$26.10; 100 lbs., \$51.00. If wanted by mail, add for postage at zone rates.

GRASS MIXTURE FOR TERRACES

This mixture is made up of fine dwarf growing grasses, with strong creeping and fibrous roots that form a compact growth of turf, resisting drought and exposure remarkably well, and when established prevents washing.

1 lb., 60c; 5 lbs., \$2.85; 10 lbs., \$5.50; 20 lbs., \$10.50; 100 lbs., \$50.00.

KENTUCKY BLUE GRASS

The most valuable and permanent lawn grass. Very slow in getting started and becoming established. Where a quick growth is desired it is best to use "Currie's Special Lawn Mixture," which has in addition to Kentucky Blue other excellent lawn grasses that will make a sod the first year, while the Blue Grass is establishing itself. Price, 1 lb., 40c; 5 lbs., \$1.50; 10 lbs., \$2.85.

LAKESIDE GRASS MIXTURE

This mixture is specially prepared for country homes where a close, even velvety turf is not easily secured, owing to the difficulty of watering, etc., so necessary for the maintenance of a perfect lawn. The grasses used are such as endure drought and rough usage to a remarkable degree.

We have made up this mixture in a great measure for the formation of lawns at Lakeside Summer Homes that can only have attention during the summer months, and for this purpose it will be found invaluable.

1 lb., 40c; 5 lbs., \$1.90; 10 lbs., \$3.75; 100 lbs., \$32.50.

SELECT LIST OF HAY AND PASTURE GRASS MIXTURES

FOR SPRING AND FALL SOWING

Where a field is to be put down to grass for a number of years a mixture of grasses that are more permanent than Timothy and Clover should be used, such as will produce good crops of hay and pasture for many years without reseeding.

We prepare mixtures of grasses for a wide range of soils and conditions, and there is hardly any land so poor or climate so unfavorable that we cannot furnish a mixture for it that will yield one or more crops of hay every year.

The first cost of seeding with these mixtures is generally more than Timothy and Clover, but the returns fully warrant the extra expense.

Only the best re-cleaned grass seeds are used by us in these mixtures, and if the soil and conditions are described, the proper proportions will be used to produce satisfactory results.

Sow 25 lbs. to the acre. Price, 25 lbs., \$4.50; 100 lbs., \$17.50.

It is a very valuable grass for Fairways especially on land lacking lime. Fancy Cleaned, Solid Seed, Free from Chaff. Per lb., 35c; 10 lbs., \$2.65; 100 lbs., \$22.00.

"MAYFIELD GIANT"

This very fine perennial Calliopsis, of Australian origin, is a considerable advance on any strain yet introduced of this highly ornamental and very useful flower. It produces a taller and more vigorous plant than the type, with longer and firmer stems and larger individual blooms, of which the ray petals are broader and form a more perfect corolla. The colour is the same familiar yellow, if anything a shade more intense. Both for the border and for cutting we can strongly recommend this excellent new strain.

ANNUAL LARKSPURS

This is one of the best known garden flowers, and in recent years a vast improvement has been effected, by careful selection in size and color of the blossoms and the general habit of the plant. Seeds sown in the open ground before the close of April will produce flowering plants by the beginning of July, and give a continuous succession of flowers from then until frost, a record that is not surpassed by any other annual. They make handsome beds or lines, and their free graceful habit and bright colors are very effective when interspersed in the old-fashioned flower or shrubby border. They stand well when cut, and a vase of one or mixed colors is indeed charming.

TESTIMONIAL

Permit me to add that I have used your seeds for many years (I frequently buy them directly from your store when I am in Milwaukee; sometimes I order by mail) and I have found them absolutely satisfactory. To date, I have had no disappointment in the annuals and perennials obtained from Currie's seeds.

Most sincerely yours,

Mrs. E. F. Stone, Beloit, Wis.

The annual Phlox is unsurpassed as a bedding plant, being one of the most brilliant and at the same time the easiest and most satisfactory plant for the garden. Seed may be sown in the open ground soon after danger of frost is past in spring, and in a few weeks the plants are covered with a mass of bloom, continuing to bear freely until cut down by frost in fall. For massing in beds or borders few plants are as showy, and they are equally serviceable planted in vases and window boxes. The Phlox is a native of Texas, and is commonly known as "Texan Pride." RANUNCULUS ASIATICUS

IMPROVED PALESTINE STRAIN (RAGIONIERI)

A remarkable creation of the talented horticulturist, Dr. Attilio Ragionieri, to whom we are already so much indebted for the beautiful Florentine Ranunculus which we introduced three years ago. The race we here present originated from a wild large-flowered single sort of a fiery red color, found on the plains of Palestine. In cultivation, however, it showed a tendency to become double and after some fifteen years of intensive selection a strain has now been evolved bearing large semi-double, double and extra-double flowers and with a wider range of more brilliant colors than in any existing type. They often show towards the center colors differing from that of the rest of the corolla, markings for instance of yellow or of pale green, adding to the kaleidoscopic charm of the mixture, in which the reds and the yellows are especially vivid and striking. The plants being very robust and extremely floriferous, we have no doubt as to the future of this excellent new strain of Ranunculus. Award of Merit, R. H. S., 1927. Pkt., 35c.

Scabiosa (Azure Fairy).

SCABIOSA COLUMBARIA

This is a South African form of the European Scabiosa and although reminiscent of Caucasia, is a distinct type. There is a decided place for this on the perennial list, as well as on the florists' cut flower list. It can be briefly described as a hardy, low growing perennial with fine, light-green foliage, some of the flowers measuring from two to two and a half inches across with short, compact petals, borne on long, slender but strong stems. We offer this in two favorite colors—pink and lavender. We consider Columbaria a valuable addition to the perennial list, especially the pink shade which is a new color for Perennial Scabiosa.

SWEET PEAS

Beautiful, Fragrant, Fashionable
HOW TO GROW THEM

Sweet Peas should be planted as early in spring as the ground can be worked. Rich loam with an abundance of well rotted manure is an ideal soil. A trench about 6 inches deep should be made, sowing the seed thinly in the bottom, and cover with an inch of soil, pressing it down firmly. Gradually fill in the trench as the plants grow, and thin out to 2 to 4 inches apart. When too close they make a weak growth with inferior flowers. Brush or wire netting should be placed in the rows as soon as the plants appear above the ground. During dry weather water thoroughly and stir the surface soil frequently to prevent evaporation. Keep the flowers cut and never allow seed pods to form, as that at once ends the flowering season.

Late fall planting of Sweet Peas is practical, and is best done just before the ground freezes up, sowing the seed about 3 inches deep, covering the rows with manure or leaves after the ground is frozen.

CURRIE'S SPECIAL MIXED FLOWER SEEDS

A flower garden may be made by broadcasting and raking in at the rate of 1 oz. per 100 square feet, mixed with sand or dry soil to secure even distribution. Pkt., 10c; oz., 25c.

CURRIE'S VEGETABLE SEEDS

ARTICHOKE

The Globe Artichoke bears large round heads with thick fleshy scales, which are cooked and served like Asparagus. Sow the seed early in March and transplant when warm in rows four feet apart and two feet in the rows. Cut the tops off in winter and protect with a heavy covering of straw or leaves. The first season will only yield a partial crop. The second year thin the shoots to three of the best and these will begin to form heads early in summer.

Another use is to cut back the stems close to the ground early in summer. The young shoots which starts up rapidly may be tied close together, filling in between with soil to exclude the air until they are blanched, and these are used in various forms of cookery or as a salad. **LARGE GREEN GLOBE**—Pkt., 10c; oz., 75c.

ASPARAGUS

Asparagus may be grown in almost any soil, and under nearly all conditions, but succeeds best in a rich, sandy friable loam with good under drainage, and yet not too dry. Avoid planting near trees or tall shrubs, because of the shade and heavy draft on the fertility of the ground. Choose an open space with a southern exposure.

Put the soil into the best possible condition before planting by working in a liberal quantity of well rotted manure, or commercial fertilizer will do where barnyard manure is not available. For family gardens dig a trench 18 inches wide for each row, placing a few inches of manure in the bottom, covering it with two or three inches of soil to prevent the roots coming in contact with the manure before active growth has begun. Set the plants from 15 to 18 inches apart in the rows, and 36 inches between the rows. In field culture it is best to set the plants three to four feet apart. In planting, the roots should be spread by dividing them in the middle, setting them over little hills of soil placed in the bottom of the trench, thus raising the crown a few inches above extremities of the roots, and at once cover with three or four inches of soil for green, and eight to ten inches for White Asparagus, taking care to press the soil firmly about the roots. The plants may be set either in spring or late in fall. We advise planting in this latitude as early in the spring as the ground can be worked. The Asparagus plant is slow to die down in the fall, so the roots cannot safely be dug until about November 1st. By this time the soil is so cool that the plants do not root readily, consequently many are winter killed.

Frequent cultivation is required to keep down weeds and to provide a mulch of loose earth for the retention of moisture, care being taken not to injure the young sprouts in the operation.

Cutting should not begin until the plants are strong and vigorous, which is generally two or three years after planting, and should be discontinued after the first of July. Later cropping is done at the expense of weakening the roots. The plants should be allowed to fully mature before cutting off early in winter, and a top dressing of three or four inches of barnyard manure applied. Asparagus being a gross feeder, naturally requires heavy fertilizing, and an application of commercial fertilizer early in spring will be beneficial.

Asparagus may be found suffering from blight, a condition frequently brought on by prolonging the cropping season, thereby weakening the roots, or it may be due to a want of fertility. So as to prevent it, apply a liberal quantity of manure every year, and above all avoid extending the cutting period too long. Should blight appear, however, spray the plants freely with Bordeaux Mixture, and destroy the affected parts.

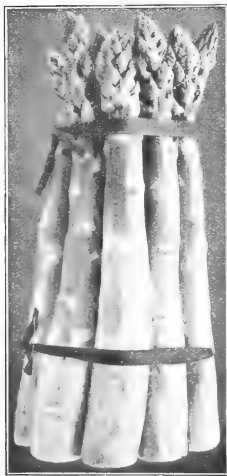

ASPARAGUS

Washington Rust Proof—A new variety, the result of breeding by the U. S. Dept. of Agriculture to obtain a rust-proof Asparagus. Is nearest to being rust-proof than any other variety. The shoots are large and deep green in color. Pkt., 10c; oz., 25c; ¼ lb., 75c; 1 lb., \$2.50.

If given a little protection it will survive the winter and make excellent greens early in the spring. One ounce will sow 100 feet of drill.

This splendid vegetable seems to thrive anywhere. It has the combined flavor of cauliflower and asparagus, and is cooked and served the same as cauliflower.

For an early crop sow the seed in a cold frame and transplant the seedlings in the open ground when danger of frost is past. For a later crop sow the seed in the open ground in May and the sprouts will be ready for use in August. Pkt., 25c; ½ oz., 30c; oz., 65c; ¼ lb., \$2.00.

Culture—Begin sowing Dwarf or Bush varieties the first week in May, if the ground is in fit condition. For successive crops sowings may be made every two or three weeks until the 15th of July. Mature in 45 to 65 days. Sow thinly in drills 2 or 3 inches deep and from 18 inches to 2 feet apart. If the soil is rather poor, the former depth will suffice. If rich, the latter. Never cultivate beans while the foliage is wet or covered with dew, because the bean-spot or anthracnose will spread very rapidly if carried on the clothing or hoe, with detrimental effect to the crop. Beans should be picked daily in order to have them tender and stringless.

One pound to 100 feet of drill, 2 bushels (120 lbs.) to the acre in drills.

Culture—Where a variety and choice of soil is at command, select that which is rather light for this crop. It must, however, be thoroughly enriched. As early in the spring as the ground can be properly cultivated, lay out the drills for the seed about a foot apart. Sow the seed thinly, covering to a depth of 1 inch; when large enough to handle, thin out the plants to about 6 inches apart. The plants pulled up may easily be transplanted elsewhere, avoiding loss.

Early Snowball Cauliflower.

**CURRIE'S DANISH MARKET
CAULIFLOWER**

"DRY WEATHER"—Extra Selected"

Comes in about three weeks later than our Selected Early Snowball. Heads larger and firmer.

Our stock of this grand Cauliflower cannot be surpassed. For packers and pickle growers it has no equal, yielding, as it does, immense, solid heads, many of which weigh over ten pounds each of solid flower.

Every plant produces a head, many of them so large that three fill a bushel basket and all perfectly solid. As the name "Dry Weather" implies, this variety possesses to a marked degree the ability to resist without deterioration extremely droughty conditions such as have been experienced during recent seasons. Because of this constitutional hardiness many growers, especially those in the drier, hotter sections, pin their faith to this fine sort as against all other varieties.

Pkt., 20c; ¼ oz., 80c; ½ oz., \$1.50; oz., \$2.50; 2 ozs., \$4.50; ¼ lb., \$8.00; 1 lb., \$30.00.

EXTRA EARLY SNOWBALL OR DANISH PERFECTION

The leaves, very closely enfolding the head, give it a particularly attractive appearance when displayed for sale, and as the inner leaves almost cover the snow-white flower, the necessity of early tying up as in the case of other early sorts is largely avoided. It is the earliest strain of its type and recommended for extra early marketing. Pkt., 25c; ¼ oz., \$1.00; ½ oz., \$1.75; oz., \$3.00; 2 oz., \$4.75; ¼ lb., \$9.00; 1 lb., \$34.00.

Cabbage, Cauliflower and Allied Vegetables—By Allen. Of Great Value to Growers, \$2.00 postpaid.

CAULIFLOWER

Culture—The Seed for early planting should be sown in February or March in a hot-bed, transplanting the plants when large enough into another or the same frame, and gradually hardening them off, preparatory to planting them out as early as the ground is in a fit condition. For late planting the Seed should be sown in May in a cold frame or open ground in soil that is well pulverized. Any good garden soil made rich by manuring, will suit. When the heads begin to form the leaves should be tied together to prevent the flower's becoming sunburnt and tough. In order to have them tender and of good flavor they must be gathered before they become too large.

1 oz. for about 3,000 plants. Set in rows 2½ feet apart and 1½ feet in the row. 3 to 4 oz. to the acre.

Our Cauliflower Seed is grown in Denmark and is the best that can be procured.

EARLY SNOWBALL

Extra Selected.

For years this has been the best early sort for the market gardener and trucker's use, and the standard variety for the amateur. Sure to head and remain pure and white when others are discolored and unsalable. The heads measure eight to ten inches across when grown in good soil. The seed we offer is of very superior quality and is grown for us by one of the most reliable Cauliflower growers in Europe, and the great care taken to keep it up to the highest standard is manifested in the superiority of the crops grown from it every year. It is of dwarf, compact habit, heads very large and pure white.

Pkt., 20c; ¼ oz., 80c; ½ oz., \$1.50; oz., \$2.50; 2 ozs., \$4.50; ¼ lb., \$8.00; 1 lb., \$30.00.

CARROT

Culture—For the successful cultivation of this root the soil should be light (sandy loam is best, enriched the previous year with manure) and deeply tilled. For an early crop the seed should be sown as early as the ground can be properly worked. For later crops it may be sown any time until about the middle of June. Be careful to compress the soil over the seed after sowing. Sow in rows about 15 inches apart, or for field culture 1½ to 2 feet apart, covering the seed about one-half to one inch deep. Keep down weeds. Thin out young plants as soon as they can be handled, leaving them about 4 inches apart.

In color it is an attractive bright orange. The flesh is tender and sweet throughout, and is almost entirely free from core. It is one of the heaviest croppers and its handsome appearance makes it an excellent bunching Carrot for market. Pkt., 10c; 1 oz., 20c; ¼ lb., 50c; 1 lb., \$1.50; 5 lbs., \$5.50

CHANTENAY IMPROVED—The market gardener's and trucker's favorite. It is an early, very productive, half-long, stump-rooted variety, smooth-skinned, fine in appearance and entirely coreless. The shoulder is unusually thick and the root tapers slightly down towards the blunt point so that it is pulled very easily. The color is a rich orange and the texture and quality are unsurpassed. For table use many regard this variety—because of its form, color, texture and delicate flavor—the finest of all sorts, and it is undoubtedly the best bunching Carrot for early market use. Pkt., 10c; 1 oz., 20c; ¼ lb., 40c; 1 lb., \$1.00; 5 lbs., \$4.25.

Golden Self-Blanching Celery.

Celery is a crop that requires a very long season. If an early crop is to be grown from seeds, the latter must be started indoors in boxes about the last of February, the plants being set in the ground, six inches apart, in May. The crop should be ready in August. Celery for winter may be grown from seeds started in the open ground in late April, but it is advisable to have a seed bed and to transplant the seedlings to the open field when large enough. It is well to cut off the lower half of the roots at transplanting time, and firming the soil around the plants is very important.

CELERY

GOLDEN PHENOMENAL

The general characteristics are those of Golden Plume, but it is decidedly taller and the stalks are much longer to the joint. It is practically as tall as the Tall strain of Golden Self-Blanching. The season for planting and maturity is the same as Golden Plume, being intermediate between Tall and Dwarf Golden Self-Blanching. The plants are heavy, compact and full hearted. The stems are broad and thick, brittle and free from strings. Of fine flavor and excellent quality all through.

In other words, this is Golden Plume with all the good qualities of Golden Plume but in addition is taller with longer edible stems and the plants are more upright and more compact. The stock is very even and the plants very uniform in size and appearance.

A trench should be opened 16 to 18 inches deep and the roots placed upright in it 1½ inches apart, and filled in with light soil, which places the neck of the roots about 8 inches below the level. If a quick growth is desired a covering of manure 10 inches deep may be used. GREEN CURLED ENDIVE

THE "CHICOREE FRISEE" OF THE FRENCH

An excellent salad plant, available long after the season for Lettuce, and more easily grown. The flavor is pleasantly bitter, stimulating and zest-giving. Is used also boiled as greens.

Green Curled is the best for general use, and is easily blanched by covering the full-grown plants with boards or pieces of slate. After severe frost the plants may be removed and planted closely in a cellar for winter use. The seed should be sown in rows about 2 feet apart and 1/4 inch deep in the drill. When sufficiently grown, thin the plants out to 8 inches apart and cultivate thoroughly while growing. A very early crop may be grown by starting the seed in hotbed, greenhouse, or window box. Good results come from early spring sowing, and even better, when treated as a fall crop. Successional sowings during July give a continuous supply after cool weather, and with a slight covering the plants may be kept in good condition well into November.

It is an ideal Lettuce for sowing again during June for use during August when regular head Lettuces will not form solid plants. Pkt., 10c; oz., 25c; ¼ lb., 45c; 1 lb., \$1.35.

Romaine Lettuce

Kohl-Rabi.

KOHL-RABI

Sow the seed early in spring and transplant first of June in rows 18 inches apart and 6 inches apart in the rows. 1 oz. to 3,000 plants.

The seed may be sown in open ground in drills and the plants thinned out to 6 inches apart. One ounce of seed will sow 300 feet of drill.

KOHL-RABI is especially adapted to the back yard garden. It resembles a turnip in flavor, and is prepared for the table in the same way, but it does not grow underground, forming a bulb instead, a few inches above the roots, from which numerous leaf stalks shoot out. When kohlrabi is about the size of a baseball, it is ready to be cut for the table. If allowed to grow much larger it gets tough and woody. Kohlrabi will grow in almost any soil, and is ready for use in a few weeks from the time the seed is sown. Moreover, a succession can be obtained all summer by sowing seeds at intervals of two weeks, and the crop can be stored in sand in the cellar for winter.

CURRIE'S MILWAUKEE MARKET

MUSK MELON

Plant in warm, rich soil in hills 4 feet apart, placing eight or ten seeds in each hill, and when danger from insects is past, thin out the plants to four of the strongest. Pinch the ends of the most vigorous vines.

In this latitude it is advisable to start the seed in paper pots indoors, or between two pieces of inverted turf to insure an early crop.

To keep off insects use Pyrox for the striped beetle and a nicotine spray for aphids. To prevent blight, after the plants have four or six leaves use Bordeaux Mixture, to which may be added arsenate of lead for eating insects.

For the home garden use Milwaukee Market for main crop, and the small Gem type for extra early.

ONIONS

Culture—The Onion is most successfully grown in a deep, rich loamy soil, and, unlike most vegetables, does best when cultivated in the same ground for a succession of years. Manure the ground well in the fall, and turn up in ridges, during the winter, and as early as it will work in the spring rake or harrow thoroughly so as to get the soil fine and level. Sow thinly in drills half an inch deep, rows twelve inches apart, and cover with fine soil, pressing it down. Keep the ground free from weeds and thin out the young plants so they may stand three or four inches apart. The small onions pulled may be eaten green and the balance allowed to mature. Along in July the tops may be broken down by lightly tramping upon them, or if a large quantity is planted a good method is to take a barrel and roll them down. This tends to stop the top growth and the bulbs then develop more rapidly.

American Purple Top Rutabaga

Currie's Select Tomato Seed

Culture—Sow the seed in a hot-bed the first week in March, in drills half an inch deep. When the plants are about two inches high, transplant into another hot-bed or into small pots, one in each pot; in that way the plants are strengthened and branch out better. Set the plants out about the first of June, about three feet apart, for early crop, mixing a shovelful of well-rotted manure in each hill. For late crops, or where the soil is heavy plant four feet apart. Water freely when transplanting, setting the plant deep, and protect from the sun for a few days until the plants are fairly started. A few plants may be raised by sowing seed in a pot or a box in the house. Where only a few plants are grown, the vines may be trained to a single stem, removing all suckers, thus inducing earliness and superiority of fruit. 1 oz. to 1,500 plants. ¼ lb. for transplanting on an acre.

Cream City

CREAM CITY TOMATO

The First Large Tomato to Ripen. Remarkably Prolific.
Flesh Thick and Solid.

A variety of exceptional merit, coming into use as early as Early Ruby and other small and unshapely extra early sorts. It is perfectly smooth and symmetrical in shape, and as large as Perfection. The plants are strong and vigorous, bearing an abundance of large, smooth fruit of a beautiful purplish crimson color. The flesh is remarkably thick, firm and solid, and of very fine quality with very few seeds. It is an excellent shipper. Does not crack or rot, as is the case with many of the old sorts. It is known to be the most profitable tomato for the market gardener and trucker, and is unsurpassed for canning purposes. Pkt., 10c; ½ oz., 25c; 1 oz., 45c; 2 ozs., 85c; ¼ lb., \$1.50; 1 lb., \$4.75.

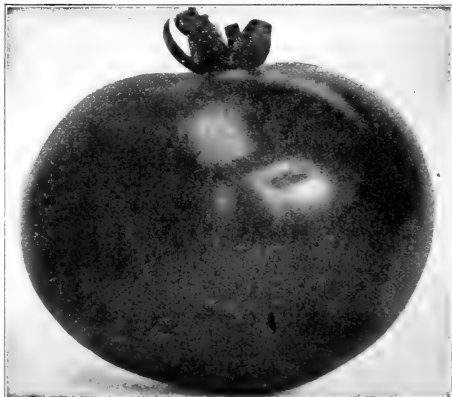

COOPER'S SPECIAL—A great treat for tomato lovers, free from acid, medium in size and globe shaped and matures early. The color is a rich pinkish red and it is quite free from all the diseases to which tomatoes are liable. Pkt., 10c; oz., 50c.

BONNY BEST—Very early, large, smooth variety. The color is scarlet, the flavor fine. A heavy cropper and a good forcing sort. Pkt., 10c; ½ oz., 20c; 1 oz., 35c; ¼ lb., \$1.10; 1 lb., \$3.25.

EARLIANA—Extra selected. Of this favorite early sort, we offer a strain saved from selected fruits only. This variety is the earliest of all the large, smooth, bright red sorts, is wonderfully prolific, and is a particularly profitable tomato for market gardeners and truckers. Pkt., 10c; ½ oz., 25c; 1 oz., 40c; ¼ lb., \$1.15; 1 lb., \$3.50.

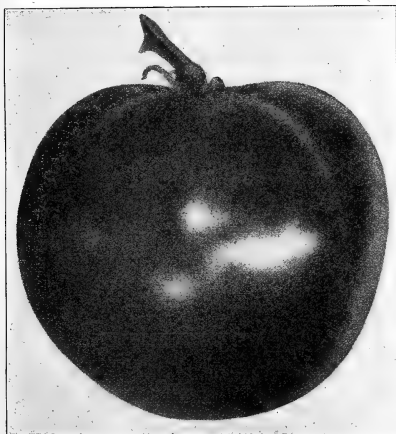

CHALK'S EARLY JEWEL—A very popular, extra early tomato. Not as early as Earliana, but fruits are smoother and larger. Color bright red; flavor excellent. Pkt., 10c; ½ oz., 20c; 1 oz., 35c; ¼ lb., \$1.00; 1 lb., \$3.00.

BREAK O' DAY—Developed by F. J. Pritchard, of Washington, D. C. A new wilt resistant tomato that is nearly as early as Earliana and as productive as Marglobe. Its fruits are large, smooth, meaty, red and globular, very similar to Marglobe but usually larger. Pkt., 20c; ½ oz., 40c; oz., 75c.

Earliana Tomato

TOMATO

Avon Early Tomato

JUNE PINK—The Earliest Pink Tomato Grown—An extra early selection from Earliana, differing chiefly in outside color, which is of the pink color preferred in some sections to scarlet. The fruit runs uniform in shape and size, about 3 inches in diameter, almost round and borne in clusters. Fresh, solid and fine. Pkt., 10c; ½ oz., 25c; oz., 40c; ¼ lb., \$1.35; 1 lb., \$4.50.

MARGLOBE—A new midseason scarlet, globe shaped sort, immune from rust and wilt. Its strong growth enables it to withstand long periods of wet and unfavorable weather. Pkt., 10c; ½ oz., 25c; oz., 45c; ¼ lb., \$1.35; 1 lb., \$4.50.

AVON EARLY—A very productive extra early variety. The fruits are large, round and smooth; color deep scarlet with thick flesh. Pkt., 10c; oz., 50c; ¼ lb., \$1.50; 1 lb., \$5.00.

LIVINGSTON'S GLOBE—Among the very first to ripen, very smooth, firm fleshed, few seeds, ripens evenly; color a beautiful glossy rose, tinged purple. Flavor very delicate and agreeable; splendid slicing variety. One of the very best for greenhouse growing or first early crop on stakes or trellis. Pkt., 10c; ½ oz., 25c; oz., 40c; 2 ozs., 75c; ¼ lb., \$1.25; 1 lb., \$4.25.

EARLY DETROIT—A comparatively new, large, early variety. The fruits are purplish-pink in color, similar to Acme in shape, but more nearly globe-shaped and are smooth and uniform, with no tendency to crack around the stem end. Vine vigorous, unsusceptible to blight and very productive. Pkt., 10c; ½ oz., 25c; 1 oz., 45c; ¼ lb., \$1.30; 1 lb., \$4.50.

PONDEROSA—This variety is the largest and heaviest in cultivation, frequently attaining a circumference of from 15 to 18 inches and a weight of a pound or more. It is particularly fine for slicing as the seed-cells are small, the flesh solid and of superior flavor, and the form very regular considering its enormous size; color, crimson purple. Pkt., 10c; ½ oz., 35c; oz., 60c; 2 ozs., 85c; ¼ lb., \$1.75; 1 lb., \$6.00.

MANGEL-WURZEL AND SUGAR BEET

Sow early in spring in deep, rich soil, in rows 18 to 24 inches apart.

5 lbs. to the acre in drills 2 feet apart. Thin out to 9 inches apart in the row.

For feeding stock few crops equal Mangel-Wurzel and Sugar Beets. Canadian farmers appear to appreciate this more than we do. The roots are stored in barns or pits before hard frost sets in and fed during the winter months.

The Giant Half-Sugar Beets are much more productive than the Sugar Beets and fully equal to the best of them in feeding qualities. A large portion of the root being above ground renders them easy to handle. Every stockman should give them a trial.

Mangel-Wurzel are also very nutritious and yield very heavy crops, often exceeding 1,500 bushels to the acre. It is not unusual to grow roots weighing upward of 20 lbs. each on fairly rich soil.

Prepare the ground thoroughly, using a liberal supply of barnyard manure, previous to sowing the seed.

IMPROVED MAMMOTH LONG RED--The largest and heaviest cropper of all the Mangels. The roots are often more than 2 feet long, and a half to two-thirds above ground, so that they are easily harvested. Oz., 10c; ¼ lb., 25c; 1 lb., 60c. By express at buyer's expense, 5 lbs., \$2.25.

GIANT INTERMEDIATE (Mammoth Long Yellow)--Similar in shape to the Mammoth Long Red, but shorter. Very prolific. Oz., 10c; ¼ lb., 25c; 1 lb., 75c. By express at buyer's expense, 5 lbs., \$3.25.

GOLDEN TANKARD--Grows largely above ground. Roots are heavy and half long; color yellow. Oz., 10c; ¼ lb., 25c; 1 lb., 55c. By express at buyer's expense, 5 lbs., \$2.25.

GIANT HALF SUGAR BEET

FOR FEEDING STOCK

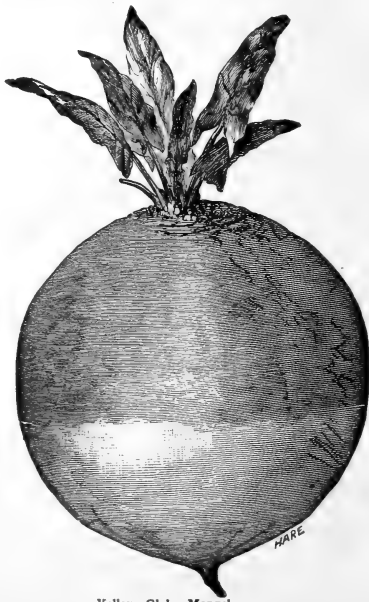

These combine the large size of the Mangels with the excellent feeding qualities of the Sugar Beets. The roots grow about two-thirds above ground, making them easily harvested.

GIANT HALF-SUGAR ROSE
--Grows to a large size. Oz., 10c; ¼ lb., 25c; 1 lb., 60c. By express at buyer's expense, 5 lbs., \$2.25.

**ALFALFA
LUCERNE**

Prices subject to market changes without notice.

The great value of Alfalfa to the stockman cannot be overestimated. No other forage crop combines so many excellent feeding qualities. The fact that three or four heavy crops of it can be cut every season should alone be an incentive to every farmer to put down at least a few acres of it. Alfalfa can be grown successfully in every state in the Union; the soil, however, should be deep and well drained. It will not succeed on heavy, sticky clay ground, or where water stands a short distance below the surface. Before sowing the seed see that the ground is well prepared by being thoroughly pulverized. Any extra work put on the ground at this time will be well repaid in the crop. If sown in spring, wait until the ground is warm, sowing from 20 to 30 lbs. of seed to the acre.

The crop should be cut for hay just as it is coming into bloom. A safe guide is to watch for the starting of the new basil shoots, which form the growth of the next crop, before cutting. If the weather is fine the morning's cuttings should be raked into windrows the same afternoon, and cocked the following day.

We recommend using Northern grown seed. The U. S. Department of Agriculture in its investigation finds that the farther north the seed is grown the harder it is likely to be, and to meet these requirements we have secured a stock of strictly pure, re-cleaned Northern grown seed.

GRIMM'S CERTIFIED ALFALFA—Choice re-cleaned seed. Per lb., 35c; 10 lbs., \$3.00; 100 lbs., \$27.50.

Gladioli, which are increasing in popularity each year, are susceptible to several diseases which retard their growth, handicap their flowering and destroy their corms. Semesan has proved effective for controlling certain of these surface-borne diseases, thereby enabling the plants to produce a crop of disease-free corms.

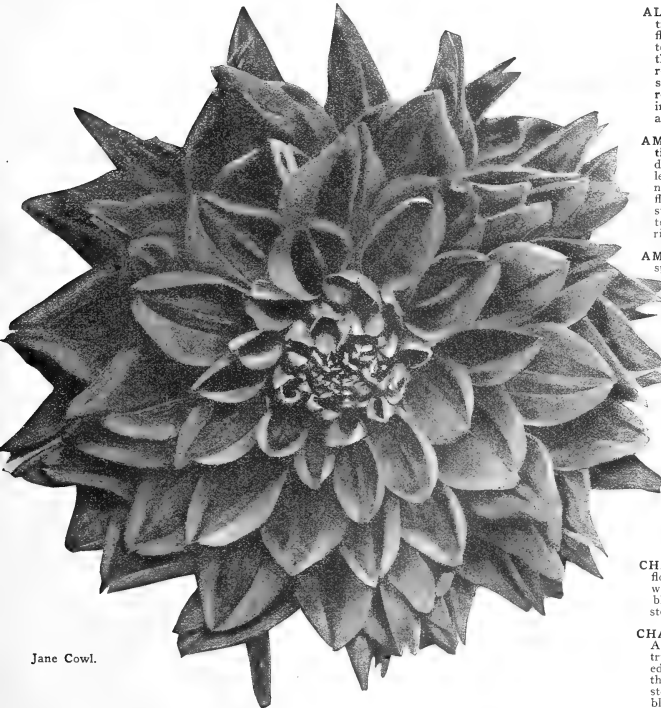

"It is a better and surer practice to disinfect all lots of diseased bulbs. For this purpose . . . one of the new organic mercury compounds, such as . . . Semesan . . . is to be recommended."

PEAT MOSS

Peat Moss Mulch prevents the soil from cracking, thereby holding the moisture in the ground. It is used to cover perennial beds, Shrubs and Evergreens. A two inch covering is sufficient for the former while three inches is considered necessary for the latter.

All potted plants will thrive better and keep well if granulated peat moss is added to the soil. Bulbs, such as Hyacinths, Tulips, Narcissus and Freesias, bloom more luxuriously when forced in Peat Moss. It is also used on old established lawns for which fall is the best time for application. All that is required when Peat Moss is added to the soil is to keep it moist allowing any surplus water to drain off.

Peat Moss is imported from Germany. It is priced: Small Bale, \$3.00; Large Bale, \$5.00.
